We strive to offer our readers a level of discourse on the subject that is common amongst friends and relatives, on a topic that is often fraught with emotion. It sounds simple, but we have found that certain camera sites in the past have instead chosen to be a page for haters and takers. We're against that, and it's why we're here. Choosing a particular brand is not an easy task. If the brand you're familiar with isn't one of those that performs consistently, it's a difficult decision to make. If one camera brand scores very well in one aspect, it inevitably scores very poorly in another. It's entirely possible to critique a camera a bit too harsh, and therefore it's perfectly fine to rate a camera higher than you would would otherwise. Photoshop is Photoshop. I'm not kidding. There is no other photo editing app out there that comes even close to it for ease of use, no matter which version of Photoshop you are using. A quick trip to the Adobe website is all that's needed to download updates, and you're doing it free of cost. Second-to-none I might add. The cloud-stored versions of projects are a godsend for frequent photo editors who may only tweak versions occasionally, especially if they're locked into a yearly subscription fee, like I am. I can guarantee you that I've spent more time this year than I ever have in my life on Facebook and iPad apps. Those are free. I can't view the same ease of use, file quality, and Photoshop-powered photo skills in a web browser. Others may value the web. I value the desktop.

When you start using Photoshop, layers and groups come very naturally to you. There are a couple ways to create layers In Photohop (or any software - I use Ps), layers are also called "pages". You can layer images, and then apply effects to each one - this is usually the easiest way to do things. Photohop doesn't have as many options for layers as Ps, however. The following are some of the best Photoshop layers that you should try to get into the habit of using.Layer Groups Classes When it comes to layers, one of the most important things you want to get used to is layers. You can create layers for anything from rinsing a windows to clipping some images from your work. For the most part, Photoshop makes the process of creating layers quite simple. However, if you want to make your life a bit easier, you can use layer groups. Layer groups are just like regular layers, however, they are not individual pages. Instead, they are like classes. You can create a class of layers, and then just use that class when it comes time to work on that area of your images. A couple things to keep in mind: You can't combine layers in a group, but you can edit the individual layers in the group. If Photoshop offers you a merge command, you would merge the layers together. If it asks you to turn off transparency, you simply turn off the transparency of the layers inside the group.Grouping Layers Above is a picture of one of the best Photoshop classes that you can create. Above, we have layers that have no transparency, so that you can always see the image behind them. Below, you can see how these layers are divided into groups using a merge command. As you can see, this was fairly easy to do. Using a merge command just makes this process easier. It's up to you if you want to use merge commands a lot, or not, this is just one of many layers that you can use. What Are the Best Photoshop Layers? Select the layer below you're working on, and then click on the little eyes icon, as shown below. You can't select multiple layers at one time, but you can move between the layers using the border, as shown above. You can also blend the top layer with the one you just selected. That can be done by selecting the layer that you want to blend with, and then using the tool, shown below. So, to blend both images, click on the top layer and then press the blend tool. A box will spawn. Following the box keys at the top, you can move and rotate the layer. 933d7f57e6
