Keymacro is a virtual keyboard which is great for mobile, and other operating systems. It's designed for Linux users, and of course for people who use the operating system on a regular basis. First things first, the application looks very neat, with a simple, and easy to use interface. You can quickly switch between a keyboard layout, and a text entry mode, even switching between Latin, Russian, and Cyrillic letters. The interface options allow you to hide symbols, and shortcuts, in case they might become inconvenient. While there's no support for context-dependent settings, the selection of language can be changed from the preferences window, including the selected layout. There are several options to customise, including adjusting layout on startup, and font, among many other things. You can also change the status bar, and hide it, among other features. The search option is rather limited, but covers most scenarios. It's able to search files, applications, settings, folders, and shortcuts. For file, and folder names, you can either type or drag and drop files and folders from the application window. To speed things up, you can use a keyboard shortcut to search and open the files you want to work with. For example, the SHIFT+F3 keyboard shortcut opens the file manager, with the search field activated. This is another neat feature which makes the application a lot more comfortable than some other alternatives. RSS feed reader The application comes with a dedicated RSS feed reader, and a cloud storage system. The reader lets you subscribe to specific feed sources, and download feeds to your hard drive. You can also share feeds, and queue them for download. The storage system is also quite handy, allowing you to sync the content with a remote server. Although it can be accessed from anywhere, and although it includes an option to keep the downloaded content to prevent it from being sent to the server, it's recommended to do so. A few last words Keymacro is an excellent virtual keyboard, featuring a context-dependent layout. The software is free to use, but comes without an option to remove ads. The interface is simple, and pretty efficient. It's missing advanced settings for keyboard shortcuts, but it's an interesting option to have at your disposal. The search function allows you to search files, and folders as well, giving a great advantage. The RSS feed reader is also very functional, and able to 2edc1e01e8
