Those interested in learning about the development of Photoshop will tell you that the original team at Adobe Photoshop did not necessarily want to have Photoshop ported to the web. Rather, they wanted to change the way people worked with photography and graphics on the computer. Since a web platform has many of the same elements that Photoshop earlier had, it made the most sense to make the porting of Photoshop to the web a part of this evolution. It started with a web designer named Leonard Rowe who was part of a team working on a project for the United Nations (UN). Rowe made the connection between the work they were producing and how a web-based environment would work with the psychology of common tasks for a website like editing images. The team came to Rowe about the idea of moving their graphics editing software to the web and he made an educated guess that he could get people to pay for the software. In fact, in 1995, the UN published a free version of Photoshop on the World Wide Web. 933d7f57e6
